

The Volume Era Is Over

Programmatic SEO in 2026: the data era has begun.

02 / 07

What changed

Publishing thousands of thin templated pages stopped working. Google filters near-duplicates.

03 / 07

The number

A study of 1,247 programmatic sites found a median indexation rate of just 38.4%.

04 / 07

The top decile

The best performers indexed 71% or more. The difference was quality gates, not page count.

05 / 07

What gates mean

At least 3 unique data fields per page and under 40% text overlap with siblings.

06 / 07

The 3 levers

Server-render, IndexNow, and a 3-tier internal link structure explained 61% of the variance.

Do this

Before you scale pages, build the quality gate. Save this.
