The job

A simple agent that pulls search data, groups it by intent, and flags the easy wins.

Step 1

Connect a keyword source and a model API.

Step 2

Give it one clear task: cluster by intent, not by phrase.

Step 3

Have it output a short, ranked brief you can act on in the morning.

The rule

The agent proposes, you decide. Never skip the review step.

Do this

Automate the research, keep the judgment. Save this.
