

The Exact Content Lengths AI Citations Reward

500-2000 words versus 50-299.

02 / 07

The split

Content between 500 and 2000 words gets cited far more than thin 50-299 word pages.

Why

The model needs enough context to trust the claim and lift a clean sentence.

The trap

Pad it to hit the word count and you lose. Length only helps when every line is useful.

The sweet spot

One idea, enough depth to prove it, no filler. That is usually 800 to 1400 words.

Structure over size

Clear heading, direct answer, named source, next step. Same shape every time.

Do this

Take your thinnest high-intent page and expand it honestly. Save this first.
