

15-25 Reactions Gets You Cited by AI

Stop chasing virality. Chase citability.

02 / 07

The finding

Semrush found cited LinkedIn posts often sit in the modest 15 to 25 reaction range.

Why modest wins

Citations are about clarity and topic fit, not loudness. The model reads, it does not applaud.

04 / 07

The trap

Chasing viral reach pulls you off-topic, which is exactly what gets you skipped.

What to chase

One clear idea, sourced, published on a rhythm, on a topic you own.

Reframe

Reach is for humans. Citability is for machines. You need both, in that order.

Do this

Audit your best-performing post. Was it clear or was it loud? Save this.
