

Stop Listing Words. Start Clustering Intent.

Keyword research in 2026.

The old way

Pull 2,000 keywords, make 2,000 pages, publish, wait, watch them fail.

The new way

Group keywords by the intent behind them, not the words in them.

The math

2,000 raw keywords usually collapse into 20 to 40 real pages.

Why it wins

One strong page per intent beats 50 thin pages competing with each other.

The filter

Ask: would one page answer all of these? If yes, they are one cluster.

Do this

Cluster your list before you brief a single writer. Save this.
