

Faster Rollouts

Core updates that used to take weeks now complete in days. The rollout clock has shortened, and so has your reaction window.

02 / 07

Sitewide Trust

Updates no longer target individual pages. They evaluate sitewide trust signals. One weak section can drag your entire domain down.

03 / 07

Trust Signals Matter

Author credentials, cited sources, transparent authorship pages, and consistent factual accuracy all feed the trust calculation.

04 / 07

Recovery Is Faster Too

Because evaluations are more systematic, fixes also propagate faster. Update your weakest pages and the next crawl can restore visibility.

What to Do Now

Audit your lowest-quality pages first. Thin content, outdated facts, and missing author bios are the fastest way to lose sitewide trust.

3.1K Monthly Searches

This keyword gets 3.1K searches a month. People are actively looking for update guidance. Having a clear, honest breakdown earns citations.
