

Entities, Not Keywords

AI retrieval does not match keywords. It identifies entities, which are the named things your content is about. Consistent naming builds machine trust.

02 / 07

Why It Matters

When AI engines cite your brand by name instead of paraphrasing your content, you have won the entity game. That is the new brand visibility metric.

03 / 07

Consistent Naming

Use your brand name, product names, and key terms the same way everywhere: site, social, schema, and third-party mentions.

04 / 07

Schema Reinforces It

Organization and sameAs schema links your entity across the web. The more consistent references, the stronger the machine understanding.

Content Structure Helps

Lead paragraphs that clearly state the entity and what it does give AI engines the confidence to cite you by name.

06 / 07

480 Monthly Searches

Entity SEO gets 480 monthly searches. Most SEOs are still optimizing for keywords. The ones building entity signals now are the ones AI engines will cite later.

Build Your Entity Sheet

List every entity your brand owns. Check consistency across all channels. Save this post for the building sheet.
