

UGC SEO: The Authenticity Signal

What machines and humans both trust

User-generated content carries authenticity signals that AI and Google both reward in rankings and citations.

Reviews, comments, and forum posts written by real users signal genuine engagement that branded content cannot replicate.

Embedding UGC on product pages increases the page's topical depth and provides unique text that search engines index.

Moderated UGC prevents spam while preserving the authenticity signal. Quality control and user voice can coexist.

**Comment "UGC" for the review play. #ugc #seo
